

# DIAL BEFORE YOU DIG CALL 1100

Electricity and other essential services are often provided through underground networks.

Dial Before You Dig is a free national community service aimed at preventing, danger damage and disruption to Australia's complex pipe and cable networks.

It is important to take care when working near underground networks to avoid damage, disruption, injury and even death from accidental contact.

In areas where an underground electricity network exists, make sure you:

- Know the location of all electrical infrastructure on or near your property or work site;
- Do a visual check for electrical infrastructure; and
- If you plan to dig near or on the verge of your property, call 1100, Dial Before You Dig, to obtain a map of underground pipes and cables in your area.

Unfortunately, not all underground asset owners participate in Dial Before You Dig so it remains important to take care when excavating and continue to do visual checks.

If there is any damage to electricity infrastructure, stay clear and report it to Horizon Power on **13 23 51** so the damage can be fixed quickly and safely.

For your own safety, never interfere with electricity infrastructure and never attach or tie anything to it. In an emergency, dial 000.

**HORIZON**  
POWER

Report any electrical incidents or faults immediately to Horizon Power by telephoning **13 23 51**.

Dial 000 in emergency situations.
