

Save on hot water costs.

If your solar hot water panels are covered by branches or dirt, they will not work as well and will cost you more money to run.

Heat Pumps.

Heat pumps are a good and cheap way to heat water. Make sure it is not damaged or it will cost you more money to run.

Working with communities.

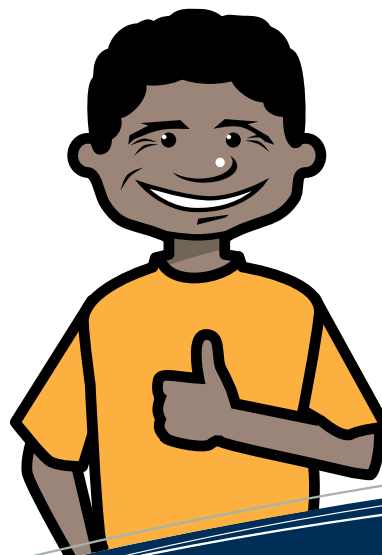

Horizon Power is working directly with AWC Training to employ local people from community to do some of the work on houses to save power and money. Horizon Power is committed to leaving lasting value in the communities we work in and providing jobs is one of the best ways we can do that.

Ways to save power in your community

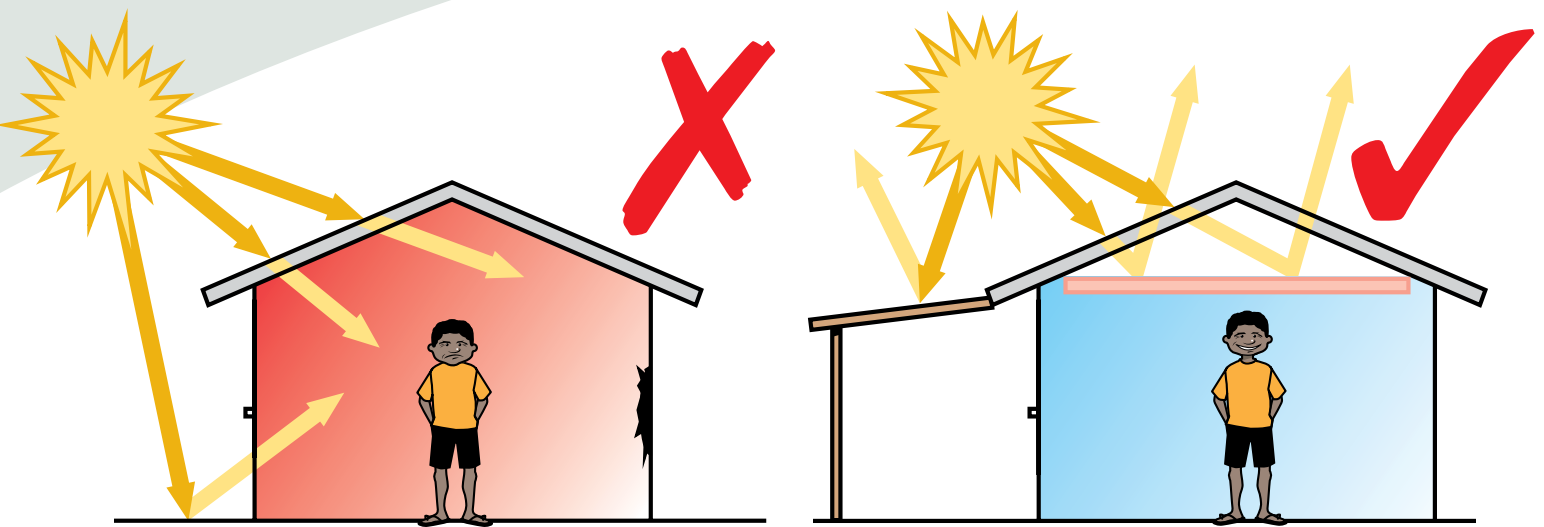

Energy Efficiency Program

Horizon Power is in your community to help you reduce your power use and save money.

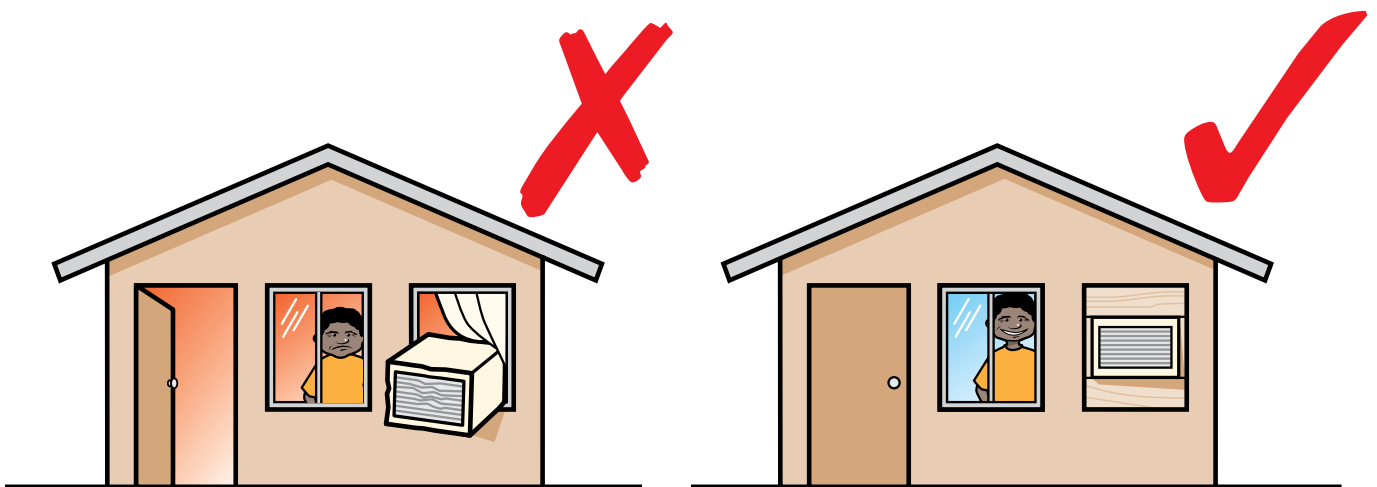

Last year, Horizon Power did an energy efficiency assessment of your home.

Under the new Energy Efficiency Program, funded by the Office of Energy, Horizon Power will work with the Department of Housing and AWC Training to make changes to houses that will save power and save you money.

Insulation and shading saves power and money.

It costs lots of money to heat and cool your house. When it's hot, insulation keeps the cold in and the heat out. In winter, it keeps the heat in. Putting shading around the house will keep the heat out. Close your doors and windows and fix holes to keep the air in.

A correctly installed air conditioner will save you power and money.

Of all appliances air conditioners cost the most money to run. If you air conditioner is fitted badly, you will lose your cool air. If your air conditioner is dirty or damaged, it will use a lot more power. Install your air conditioner properly, look after it and make sure it is kept clean.
